GREENLINK HUB · APPLY · TEMPLATE · PRINT ON A3

Green Project Card

Fill every box with post-its first, then write the final version. Three real figures with sources turn a good idea into a credible one. Used by all six teams at LTT3, Balıkesir.

Project name 1

Short, memorable — something you would put on a poster.

Environmental problem 2

One sentence. Use the root cause you found with the Five Whys.

For whom? 3

Who is affected? Who will use or play your prototype?

What does the user DO? 4

One verb only: plant, switch off, collect, irrigate...

How do they win? 5

What does success look like on screen or in real life?

How do they lose? 6

What happens if the problem gets worse?

What does the sensor or real data change? 7

The link between the real world and your prototype.

Scope check 8

How many objects in the scene (max 8)? One scene, one mechanic, three minutes of use.

Three real figures — with sources

Example: "1 kWh of electricity in Türkiye = ___ g CO_2 — source: link". No source, no number.

#	Figure	Source (link)
1		
2		
3		

Score formula

Turn one figure into your scoring rule. Example: "Plant a tree: +21 points, because a tree stores about 21 kg of CO_2 a year" — use your own sourced figure.
